Professional Summary

Final-year **Computer Science undergraduate (CGPA 9.12)** specializing in **Software Engineering, Cybersecurity, and AI**. Experienced in building scalable, secure applications and RESTful APIs using **Python, Java, FastAPI, and React.js**. Passionate about network security, full-stack development, and leveraging machine learning to solve complex computational problems.

Education

Gayatri Vidya Parishad College of Engineering (GVPC) Visakhapatnam, India
B.Tech in Computer Science and Engineering CGPA: 9.12

Andhra Polytechnic College Kakinada, India
Diploma in Computer Science and Engineering Percentage: 9.44

Experience

Software Engineer Intern Jan 2024 – May 2024
HCL Technologies, India

- Built and optimized user-facing mobile interfaces using **Java and XML layouts** with focus on responsiveness and usability.
- Developed a QR-based Cycle Management App serving **120+ active users**.
- Improved UI responsiveness and reduced screen load time by **40%** through component optimization.
- Collaborated with cross-functional teams to debug UI issues and improve user experience.

Technical Skills

Programming Languages: Java, Python, JavaScript, C++, SQL

Databases: MongoDB, PostgreSQL, Firebase Realtime Database

Networking & Cybersecurity: TCP/IP, Network Security, Packet Analysis, Scapy, Intrusion Detection Systems

Machine Learning & AI: Scikit-Learn, Pandas, NumPy, Data Preprocessing, Classification Models, Generative AI, LLM Applications, RAG

Tools & Platforms: Git, GitHub, Docker, Linux, Postman, Vercel

Projects

NetSentinel AI – Intelligent Network Threat Detection System [GitHub](#)

- Developed a Network Intrusion Detection System (NIDS) for monitoring and analyzing real-time network traffic.
- Implemented packet capture and protocol inspection using Scapy to detect suspicious activities including port scans, SYN floods, ICMP sweeps, and DNS-based threats.
- Integrated threat intelligence feeds and automated alert generation for security event monitoring.
- Designed a modular architecture for traffic analysis, attack detection, logging, and reporting.

AutoArchitect – AI-Powered Software Architecture Intelligence Platform [GitHub](#)

- Developed an AI-powered platform that automatically analyzes GitHub repositories and generates architecture documentation.
- Built repository analysis pipelines to identify system components, dependencies, APIs, and architectural patterns.
- Generated architecture diagrams and technical documentation to improve codebase understanding and developer onboarding.
- Integrated LLM-based interactions to enable natural-language exploration of software systems.
