Professional Summary

Final-year **Computer Science undergraduate (CGPA 9.44)** specializing in **Data Analysis, Machine Learning, and Database Management**. Experienced in extracting, cleaning, and analyzing complex datasets using **Python, SQL, Pandas, and NumPy** to drive actionable insights. Skilled in building data pipelines, developing interactive visualizations, and applying statistical models. Passionate about transforming raw data into strategic solutions and actively seeking Data Analyst opportunities.

Education

Gayatri Vidya Parishad College of Engineering (GVPC) Visakhapatnam, India
B.Tech in Computer Science and Engineering CGPA: 9.12

Andhra Polytechnic College Kakinada, India
Diploma in Computer Science and Engineering Percentage: 94%

Technical Skills

Data & Analytics: Python, Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn, Data Cleaning, Statistical Analysis

Databases: SQL, PostgreSQL, MongoDB, Firebase Realtime Database

Programming Languages: Python, Java, C++, JavaScript

Tools & Visualization: Alteryx, Jupyter Notebook, Streamlit, Excel, Git, Docker, Postman, Vercel

Experience

Android Engineer Intern Jan 2024 – May 2024
HCL Technologies, India

- Developed backend services and processed operational data for a QR-based application serving **120+ users**.
- Optimized database queries to reduce data retrieval latency, improving overall system responsiveness by **40%**.
- Collaborated with cross-functional teams to analyze system bottlenecks and implement data-driven performance improvements.

Projects

ClauseWise – Intelligent Document Analysis System [Github](#)

- Developed an AI-powered analytical tool utilizing Streamlit, FastAPI, and IBM Granite models to parse and simplify complex contract data.
- Built Natural Language Processing (NLP) data pipelines to extract key information, categorize terms, and identify anomalies in textual datasets.
- Implemented an interactive dashboard to visualize document metrics and present actionable summaries to users.

NetSentinel AI – Network Data Analytics & Threat Detection [Github](#)

- Developed an anomaly detection system for analyzing high-volume, real-time network traffic datasets.
- Utilized machine learning algorithms and statistical analysis to classify network behaviors and detect data anomalies (e.g., port scans, SYN floods).
- Designed a modular data pipeline for feature extraction, packet logging, and generating historical analytical reports.
